Instructions for calculating voter statistics

Each poll pad has its own Checkins count (see Image 1) which is a total of all voters—registered and EDR (Election Day registration)—who were checked in on that poll pad.

Record the Checkins count from each poll pad in the Checkins boxes, then add these boxes together to determine the Total. This total is the number of voters who checked in at the polling place.

Record the Ballot Counter Tape Total from the Scan Ballot Counter Report. This number is the total ballots cast into the ballot counter. If this number does not equal the total number of voters who checked in at the polling place, see below for possible reasons.

Possible discrepancies in polling place statistics

If the Total for Checkins does NOT match the Ballot Counter Tape Total, please investigate the discrepancy and record what you discover in the space provided on the other side of this sheet marked "!"

More ballots cast than checkins on the poll pads	More checkins on the poll pads than ballots cast
<ul style="list-style-type: none"> Did an election judge miss checking a voter in on the poll pad? Was an absentee ballot cast in the ballot counter? (To determine which may be an absentee ballot, look for one with no judge initials in the upper-right corner—and it will likely have fold creases.) Did you run a test ballot through the ballot counter? 	<ul style="list-style-type: none"> Did an election judge forget to cancel a checkin on the poll pad? Did a voter get checked in as both a registered voter and a non-registered voter on the poll pad? Did a voter receive a ballot then decide not to vote? Was the emergency slot used and the ballot(s) never run through the counter as required?

If any of these reasons apply, please provide it on the front of this sheet.
