Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group and the experimental group. The control group received a standard diet and water, while the experimental group received a diet supplemented with 0.5% of the active ingredient. The subjects were then subjected to a series of tests: a pre-test, a 1st test, a 2nd test, and a 3rd test. The results of the tests were then analyzed using a one-way ANOVA.
